EPA Reg.

Date of Issuance:

89167-23

DEC 2 1 2012

Term of Issuance: Unconditional

Name of Pesticide Product:

AX Tebucon 3.6 SC **Fungicide**

NOTICE OF PESTICIDE:

Registration

Reregistration

(Under FIFRA, as amended)

Name and Address of Registrant (include ZIP Code):

Axion AG Products, LLC. 3937 Cedarwood Lane Johnstown, CO 80534

Note: Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above EPA registration number

On the basis of information furnished by the registrant, the above named pesticide is hereby registered under the Federal Insecticide, Fungicide and Rodenticide Act. Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is unconditionally registered in accordance with FIFRA section 3(c)(5) provided that you:

- Submit and/or cite all data required for registration of your product under FIFRA sec 3(c)(5) when the Agency requires all registrants of similar products to submit such data; and submit acceptable responses required for reregistration of your product under FIFRA section 4.
- 2. Make the following change to the label:
 - a. Change the product registration number to "EPA Reg. No. 89167-23"
 - b. On page 18, revise the seed tag labeling to read "Treated Seed. Do not use for food, feed, or oil purposes. "Excess treated seed may be used for ethanol production only if (1) by-products are not used for livestock feed and (2) no measurable residues of pesticide remain in ethanol by-products that are used in agronomic practice." Additionally place parenthesis around seed tag labeling.

Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the penticide registered under EPA Rep. No. 89167

STOP - Read the Label Before Use

61- KEEP OUT OF REACH OF CHILDREN CAUTION

	FIRST AID
If swallowed:	Immediately call a poison control center or doctor for treatment advice.
	• Do not induce vomiting unless told to do so by a poison control center or
	doctor.
	Have a person sip a glass of water if able to swallow.
	Do not give anything by mouth to an unconscious person.
If on skin or	Take off contaminated clothing.
clothing:	Rinse skin immediately with plenty of water for 15-20 minutes.
•	• Call a poison control center or doctor for treatment advice.
If in eyes:	Hold eye open and rinse slowly and gently with water for 15-20 minutes.
	• Remove contact lenses, if present, after the first 5 minutes, then continue
	rinsing eye.
	Call a poison control center or doctor for treatment advice.
In inhaled:	Move person to fresh air.
	• If person is not breathing, call 911 or an ambulance, then give artificial
	respiration, preferably by mouth-to-mouth, if possible.
	Call a poison control center or doctor for further treatment advice.
	HOT LINE NUMBER
I I the man decad	container or label with you when calling a paiger control contar or dectar or gains

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For emergency information concerning this product, call the National Pesticides Information Center (NPIC) at 1-800-858-7378 seven days a week, 6:30 am to 4:30 pm Pacific Time or your poison control center at 1-800-222-1222.

NOTE TO PHYSICIAN

No specific antidote. Treat symptomatically. The compound does not cause any definite symptoms that would be diagnostic. Contact with the eyes may cause irritation.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

Harmful if swallowed, inhaled or absorbed through skin. Avoid contact with skin, eyes, and clothing. Avoid breathing vapor or spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category C on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear

- Long-sleeved shirt and long pants,
- chemical-resistant gloves, such as barrier laminate, or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or viton,
- shoes plus socks.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to mammals, fish and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash water or rinsate.

Ground Water Advisory: Tebuconazole is known to leach through soil into ground under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Surface Water Advisory: This product may contaminate water through drift of spray in wind. This product has a high potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to

runoff that contains this product. A level, well maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall- runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI). The REI for each crop is listed in the application directions associated with each crop.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls.
- Chemical-resistant gloves, such as barrier laminate or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or viton,
- Shoes plus socks.

NON AGRICULTURAL USE REQUIREMENTS

The requirements in this box only apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses, Golf Course Turf, and Landscape Uses. Keep children and pets out of treated areas until sprays have dried.

PRODUCT INFORMATION

Read the entire Directions for Use and CONDITION OF SALE AND LIMITATION OF WARRANTY AND LIABILITY before using this product.

SHAKE WELL BEFORE USING

Spray Volume This product may be applied in a minimum of 10 gallons of spray solution per acre by ground sprayer, or in a minimum of 5 gallons of spray solution per acre by

aircraft spray equipment. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary increase the spray volume per acre for complete crop coverage.

Chemigation: Apply this product through irrigation equipment only to crops and diseases for which the chemigation use is specified. Apply this product only through center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move; or drip (trickle) irrigation systems. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non uniform distribution of treated water. If you have questions about calibration you should contact State Extension Service specialists, equipment manufacturers, or other experts. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow. The pesticide injection pipeline must contain a functional, automatic, quick closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (e g diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment.

Maintain continuous agitation in mix tank during mixing and application to assure a uniform suspension. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. Pesticide may be applied continuously for the duration of the water application.

Mixing: Add labeled amount of this product into the spray tank while filling with water to the desired level. Operate the agitator while mixing. If other materials are added to the spray tank, this product should be thoroughly dispersed prior to the addition of other materials. Do not tank mix with products containing a prohibition against tank mixing. Follow the most restrictive labeling requirements of any tank mix product.

Compatibility: To determine the compatibility of this product with other products, the following procedure should be followed: Pour the recommended proportions of the

products into a suitable container of water, mix thoroughly and allow to stand at least five minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible. For further information contact your Axion Ag Products LLC representative.

Resistance Management Statement

This product is a Group 3 fungicide which exhibits no known cross resistance to other fungicide groups. However fungal pathogens are known to develop resistance to products with the same mode of action when used repeatedly. Any fungal population may contain or develop individuals that are resistant to this product and other Group 3 fungicides. If Group 3 fungicides are used repeatedly in the same field or in successive years as the primary method of control for targeted diseases the resistant isolates may eventually dominate the fungal population. Because resistance development cannot be predicted the use of this product should conform to resistance management strategies established for the crop and use area. Such strategies may include rotation and/or tank mixing with products having different modes of action or limiting the total number of applications per season. Contact your local extension specialist certified crop advisor and/or manufacturer for fungicide resistance management and/or integrated disease management recommendations for specific crops and resistant disease populations. Axion Ag Products LLC encourages responsible resistance management to ensure effective long term control of the fungal diseases on this label.

DISEASE CONTROL IN CROPS

APPLICATION DIRECTIONS		IS
CROP	DISEASE	RATE OF THIS PRODUCT
Asparagus	Rust (Puccinia spp)	4 to 6 fl. oz. / A
	ferns after harvest of spears is earliest sign of rust pustules o conducive for rust developmed product per acre (0.11 lb. ai to alternation with another effect conditions of severe rust pressequent applications on a 14 d	r when weather conditions are ent. Apply 4 to 6 fl. oz. of this to 0.17 lb. ai per acre) in tive fungicide. Under sure use the higher rate. ay interval as necessary to ot apply to harvestable spears. So of harvest in California and to not make more than three

Comments Applications may be made using ground or aerial application equipment. A 50 foot spray drift buffer zone is required for all aerial applications. For optimum disease control the lowest labeled rate of a spray surfactant should be tank mixed with this product. This product is a sterol demethylation inhibitor (DMI) fungicide (Group 3). Alternating This product with other DMI fungicides may lead to resistance.

APPLICATION DIRECTIONS		
CROP	DISEASE	RATE OF THIS PRODUCT
Barley	Rust (Puccinia spp)	4 fl. oz. / A
	Head blight (Fusarium spp) Suppression	
	Notes Apply this product in a magnetic spray solution per acre by ground gallons of spray solution per acre fil. oz. of this product may be apply season. Do not apply within 30 after harvest may be fed or used livestock or feeding of green for days after the last application of should be observed closely for a particularly when susceptible valunder prolonged conditions favore development. Application timing directions Rusts Apply this product at the on foliage.	nd or in a minimum of 5 re by air. A maximum of 4 oplied per acre per crop days of harvest. Straw cut d for bedding. Grazing rage is permitted 6 or more f this product. Barley fields early disease symptoms arieties are planted and/or orable for disease

Fusarium head blight Optimal timing of this product for
Fusarium head blight suppression is when main stem heads
have fully emerged (Feekes 10.5) on 50% of the plants.

Comments For optimum disease control the lowest labeled rate of a spray surfactant should be tank mixed with this product. This product must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time This product will be resistant to weathering. This product is a demethylation inhibitor (DMI) fungicide (Group 3) Restricted entry interval (REI) = 12 hours

APPLICATION DIRECTIONS		
CROP	DISEASE	RATE OF THIS PRODUCT
Grasses grown for seed	Rusts (Puccinia spp.)	4 to 8 fl. oz. / A
	Apply the specified rate of this product as soon as weather conditions are favorable for rust development or when first rust pustules are present. Repeat applications at 14 to 16 day intervals. Under heavy disease pressure use 6 to 8 fl. oz./A and shorter spray intervals.	
	Powdery mildew	4 to 8 fl. oz. / A
	Apply specified rate of this product when powdery mildew f appears on the leaves. Repeat applications at 14 to 16 day intervals. Under heavy disease pressure use 6 to 8 fl. oz./A a shorter spray intervals.	

Comments Apply the specified rate in a minimum of 20 gallons of water per acre with ground sprayers or in a minimum of 10 gallons of water per acre with aircraft. Thorough coverage is important for optimum disease control. For optimum benefit the lowest specified rate of a spray surfactant should be tank mixed with this product. A maximum of 16 fluid ounces (1 pint) may be applied per acre per crop season. This product may be applied up to 4 days before harvest. Chaff screenings and straw from treated areas may be used for feed purposes; however, do not forage, cut green crop, or use seed for feed purposes. Regrowth may be grazed starting 17 days after last application.

	Early leaf spot	
	Late Leaf spot	
	Leaf rust	
,	Web blotch (Phoma)	
	Pepper spot (Leptoshaerulina)	
	FOUR APPLICATION SPRAY PRO	OGRAM: Apply the specified rate
	in a preventive spray schedule. See tab	le below for proper timing of

applications. Applications of chlorothalonil should be made prior to and following applications of this product to discourage development of resistant strains of fungi. For optimum control of foliar diseases such as leaf rust web blotch and pepper spot the lowest label specified rate of a spray surfactant should be tank mixed with this product.

LEAF SPOT ADVISORY SCHEDULE For control of soilborne diseases in an advisory schedule apply this product in the first advisory spray in July and continue applications of this product at 14 day intervals. Applications after August 15 should be tank mixed with chlorothalonil

Instructions For optimum control of the specified soilborne diseases four consecutive applications of this product must be made at 14 day intervals.

for resistance management purposes.

A maximum of 28.8 fluid ounces of this product may be applied per crop season. This product may be applied up to 14 days before harvest. Do not feed hay or threshings or allow livestock to graze in treated areas.

This product is a sterol demethylation inhibitor (DMI) fungicide. Chlorothalonil may be tank mixed at the rate of 12 ounces of active ingredient with this product as a leaf spot resistance management strategy. A spray surfactant is not necessary when this product is tank mixed with chlorothalonil. Mixing or alternating of this product with other DMI fungicides may lead to resistance.

This product must be carried by rainfall or irrigation into the root and pod zone for control of root and pod rots caused by *Sclerotium rolfsii* and *Rhizoctonia solani*. Drought conditions will decrease the effectiveness of this product against the root and pod rots. Use this product in conjunction with cultural practices that are known to reduce the severity of soilborne diseases such as proper crop rotation practices.

Timing of this product Application for Optimum Control of White Mold and Rhizoctonia Limb and Pod Rot		
Spray Program	This Product Application No.	Chlorothalonil Application No.

	APPLICATION DIRECTIONS		
CROP	DISEASE	RATE OF THIS PRODUCT	
Pecan	Brown leaf spot	4 to 8 fl. oz. / A	
	(Sirosponum diffusium)		
	Downy spot		
	(Mycosphaerella caryigena)	·	
	Liver spot		
	(Gnomonia caryae)		
	Scab		
	(Cladosponum caryigenum)		
	Vein spot		
	(Gnomonia nerviseda)		
	Zonate leaf spot		
	(Grovesima pyramidalis)		
	Notes Apply this product in a preventive spray schedule beginning at ea		
	bud break (young leaves unfolding) and continue applications at 10 to 14 da		
		d. This product should be applied at 4 fl.	

oz. per acre in a tank mix with the recommended rate of Super-Tin® in cover sprays. Follow label directions for the use of Super-Tin. Do not add & surfactant to the spray solution when tank mixing this product with Super-Tin. Apply this product in a spray volume of 15 or more gallons per acre by air or 50 or more gallons per acre by ground. Apply 7 to 8 fl. oz. per acre of this product to full size mature trees and 4 to 6 fl. oz. per acre of this product to smaller trees. Apply the high rate to varieties that are highly susceptible to the indicated diseases or when severe disease conditions exist. The lowest labeled rate of a surfactant may be added to the spray solution for optimum control of the indicated diseases. Do not apply after shucks begin to split. A maximum of 32 fl. oz. of this product may be applied per acre per crop season. Do not cut cover crops in treated areas for feed or allow livestock to graze treated areas.

Comments For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest recommended rate of a spray surfactant may be tank mixed with this product. This product must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time this product will be resistant to weathering. This product is a demethylation inhibitor (DMI) fungicide (Group 3).

Restricted entry interval (REI) = 12 hours

APPLICATION DIRECTIONS		
DISEASE	RATE OF THIS PRODUCT	
Rust (<i>Phakospora</i> pachyrhizi) Powdery mildew (<i>Microsphaera</i>	3 to 4 fl. oz. / A	
	Rust (Phakospora pachyrhizi) Powdery mildew	

INSTRUCTIONS Apply this product as a broadcast foliar spray as a preventative spray or at first visible symptoms of disease. Repeat applications on a 10 to 14 day spray interval if environmental conditions are favorable for continued disease development. Use the higher rates and shorter spray intervals when disease pressure is severe. The lowest labeled rate of spray surfactant must be tank mixed with this product. Apply this product in a minimum of 10 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons per acre by aircraft spray equipment.

Restrictions Applications may not be made within 21 days of harvest. Do not apply more than 3 applications per season. Do not apply more than 12 fl. oz./a per use season.

APPLICATION DIRECTIONS			
CROP	DISEASE	RATE OF THIS PRODUCT	
Sunflower	Rust (Puccinia helianthi)	4 to 6 fl. oz. / A	
	Notes Apply specific dosage of this product at the earliest sign of infection (rust pustules developing) or when weather conditions are favorable for		

rust development. Apply higher rate to highly susceptible varieties and/or under severe disease conditions. Application may be repeated at 14 days if necessary to maintain control of the disease. Apply specified dosage in a minimum of 20 gallons of spray solution per acre by ground or a minimum of 5 gallons of spray solution by air. Do not apply more than 16 fl. oz. of this product per acre per season or within 50 days of harvest.

Comments For optimum disease control the lowest labeled rate of a spray surfactant should be tank mixed with this product. Contact your state Extension Service or Axion Ag Products LLC representative for a list of approved surfactants. This product must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time this product will be resistant to weathering. This product is a demethylation inhibitor (DMI) fungicide (Group 3).

Restricted entry interval (REI) = 12 hours

APPLICATION DIRECTIONS

	Head blight or scab		
	(Fusarium spp) Suppression		
	Notes Wheat fields should be observed closely for early disease		
	symptoms particularly when susceptible varieties are planted and/or		
	under prolonged conditions favorable for disease development. A		
	maximum of 4 fl. oz. of this product may be applied per acre per crop		
	season. Do not apply within 30 days of harvest. Straw may be fed or		
	used for bedding. Do not allow livestock to graze or feed green forage		
	to livestock prior to 6 days after treatment with this product. Apply this		
	product in a minimum of 10 gallons of spray solution per acre by		

ground or in a minimum of 5 gallons of spray solution per acre by air.

Application timing directions - Rusts Apply this product at the earliest sign of rust pustules on foliage.

Fusarium head blight Optimal timing of this product for Fusarium

Fusarium head blight Optimal timing of this product for Fusarium head blight suppression is the beginning of flowering on main stem heads (Feekes 10.51)

Comments For optimum disease control the lowest labeled rate of a spray surfactant should be tank mixed with this product. This product must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time this product will be resistant to weathering. This product is a demethylation inhibitor (DMI) fungicide (Group 3).

Restricted entry interval (REI) = 12 hours

SEED TREATMENT- Corn (Sweet Corn, Field Corn, Field Corn Grown For Seed, and Popcorn)

For control of soilborne and seedborne Fusarium and soilborne and seedborne head smut **SEED LABELING:** To meet U. S. Federal Seed Act requirements all seed treated with AX TEBUCON 3.6 SC FUNGICIDE must be labeled:

TREATED SEED. DO NOT USE FOR FOOD, FEED, OR OIL PURPOSES. Treated with Tebuconazole

USE PRECAUTION When using formulations that do not contain dye to comply with 40 CFR 153.155, all seed treated with an economic poison must be colored to distinguish and prevent subsequent inadvertent use as a food for man or feed for animals.

DISEASE	RATE Fl. oz./CWT	DIRECTIONS FOR USE
Soilborne and	0.071	Apply as a seed treatment using standard slurry
Seedborne		or mist type seed treatment equipment. Uniform
		application of seed is necessary to ensure seed
Fusarium	· ·	safety and best disease protection. Seed should
Soilborne and	0.27 - 0.54	be sound and well cured prior to treatment.

		to ensure complete seed coverage. Consult a
Head smut		seed treatment specialist regarding slurry rates
(Sphacelotheca		recommended for the crop to be treated with
reilana)		this product. The length of control will vary
,		depending on the rate used.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, AND ESTUARIES.

Apply only during alternate years in fields adjacent to aquatic areas listed above.

Do not apply by ground or air within 100 feet of aquatic areas listed above.

Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetative filter strip.

Spray Drift Management: For aerial applications, the spray boom should be mounted on the aircraft so as to minimize drift caused by wing tip vortices. The minimum practical boom length should be used, and must not exceed 75% of the wingspan or rotor diameter.

Use the largest droplet size consistent with pest control. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible and by avoiding excessive spray boom pressure. Apply in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment.

Spray should be released at the lowest possible height consistent with good pest control and flight safety.

Applications more than 10 feet above the crop canopy should be avoided.

Make aerial or ground applications when wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph.

Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area.

Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperature.

Do not make aerial or ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

ROTATIONAL CROPS

Treated areas may be replanted with any crop specified on this label as soon as practical after last application. Any crop not specified on this label may be planted into treated areas 120 days after last application.

DISEASE CONTROL IN GOLF COURSE TURF, FIELD, NURSERY AND CONTAINER ORNAMENTALS AND COMMERCIAL AND RESIDENTIAL LANDSCAPES

Chemigation Do not apply this product through any type of irrigation system

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES, OR NATURAL PONDS AND ESTUARIES

- Do not apply within 100 feet of the aquatic areas listed above
- Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetation filter strip
- See Spray Drift Management section for further information

Spray Drift Management

Make ground application when wind velocity favors on target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph.

Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction toward the aquatic area.

Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperatures.

Do not make ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

Spray Volume For best results this product may be applied in 66 - 132 gallons of water per acre for turf using ground based equipment. For ornamentals 50 - 300 gallons of finished spray per acre are recommended depending upon the equipment, plant species and plant growth stage at time of application. For the most effective results equipment calibration should be checked regularly. When using lower spray volumes be sure to maintain uniform application and full crop coverage so as to ensure effective control. Increase spray volume to ensure proper application if required.

Compatibility Test for Mix Components

Before mixing components always perform a compatibility jar test. For 66 gallons per acre spray volume use 5 cups of water in a clear clean mixing jar. For other spray volumes adjust accordingly. Only use water from the intended source at the source temperature. Add components in the sequence indicated below in Mixing Order, using 3 teaspoons for each pound of dry product or 1 1/2 teaspoon for each pint of liquid product of specified label rate per acre. Always cap the jar and invert 10 cycles between component additions. When the components have all been added to the jar and fully mixed let the solution stand for 15 minutes. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (clabbered) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent and use the compatibility agent as directed on its label.

Mixing Continuous agitation is required during mixing. When mixing this product and water, use the specified application rates as listed for each crop on this label. Before combining any other substances with the mixture ensure that this product is completely dispersed in the mixture.

Recommended Mixing Procedure

- 1. Water Add three quarters of the required volume to a thoroughly clean sprayer tank
- 2. Agitation Start agitation and maintain constant agitation throughout mixing and application.
- 3. If an inductor is used rinse it thoroughly after each component has been added.

- 4. Products in PVA Bags Place any product contained in water soluble PVA bags into the mixing tank. Wait until all water soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
- 5. Water Dispersible Products Including dry flowables (DF) wettable powders (WP) suspension concentrates (SC) or suspensions (SE).
- 6. Water soluble products.
- 7. Emulsifiable concentrates (such as oil concentrates when applicable).
- 8. Water soluble additives (such as AMS or UAN when applicable).
- 9. Remaining quantity of water.

DISEASE CONTROL IN GOLF COURSE TURF

Turf Use Restrictions and Precautions

For use on golf course turf only.

Do not use on home lawns and turf sites associated with apartment buildings, daycare centers, playgrounds, playfields, recreational parks, athletic fields, athletic fields located on or next to schools (i.e. elementary middle and high school), campgrounds, churches and theme parks.

Not for homeowner use.

Not for use on turf being grown for sale or commercial use as sod.

Do not use clippings for animal feed.

Do not exceed 3.6 fl. oz. of this product per 1,000 sq ft per year.

Do not apply more than 6 applications per year.

Product Information

For use on all golf turf applications of cool season and warm season grasses (such as Bentgrasses, Bluegrasses, Fescues, Ryegrasses, St Augustine grasses, and Zoysia) or their mixtures. This product is not phytotoxic to any of the above mentioned grasses when used in accordance with the label.

Note: Bermudagrass can be sensitive to this product under certain conditions. Do not apply consecutive applications during or just after dormancy break. Avoid applications when temperatures are expected to exceed 85 degrees F.

This product can be used for the prevention and control of the diseases mentioned in the table below. Begin applications when conditions favor disease development and repeat applications as long as these conditions persist. Preventative treatments can be applied using 28 day intervals as indicated. When treating golf greens, always treat aprons and approaches. Spray uniformly over the area to be treated with properly calibrated equipment.

Apply the specified amount of this product in sufficient water for thorough coverage. A volume of 66-132 gallons per acre (1,530 gallons per 1,000 sq ft) is recommended. Apply using properly calibrated, low volume, hand held, mechanical or motorized ground broadcast equipment. Application to small areas may be made with low pressure handwand or backpack equipment. Maintain constant agitation during application.

Depending on the disease this product should be watered into the crown and active root zone for best results. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. For best results use spray mixture the same day it is prepared.

If turf breaks dormancy during winter months a second application may be made. Do not apply over a snow cover or when turf is dormant. It is recommended that this product be tank mixed with other registered snow mold products for best season long results.

NOTE Apply the specified amount of this product in 1 5 to 3 0 gallons of water per 1000 sq ft. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. Do not use clippings for animal feed. Do not exceed 3 6 fl. oz. of this product per 1000 sq ft per year.

Do not exceed 6 applications per year

DISEASE CONTROL IN FIELD NURSERY AND CONTAINER ORNAMENTALS AND COMMERCIAL and RESIDENTIAL LANDSCAPES

Ornamental Use Restrictions and Precautions

For use on ornamental plants only, not for use on woodlands or forest management. Not for homeowner use.

Do not apply more than 10 fl. oz. per acre in a single application.

Do not apply more than 0.94 gallons (120 fl. oz.) of this product (equal to 3.38 lbs of tebuconazole) per acre per year.

Do not make more than 4 applications per year at highest rate.

Do not apply to bearing fruit trees or vegetables.

Restricted Entry Interval (REI) = 12 hours

This product can be used in a preventative and curative disease control program for the listed plant types and disease in the table below. Optimum disease management is obtained when this product is used in conjunction with sound disease management practices. Apply material with properly calibrated, hand held, mechanical or motorized spray equipment. Begin applications when disease first appears and repeat at 14 - 21 day intervals during the growing season. Use the shortest interval when conditions are unusually favorable for the development of disease. For hand held mechanical or motorized applications mix as directed below and apply as a full coverage spray to drip for the prevention and control of the diseases listed below.

Choose a finished spray volume appropriate for the size of the plants and amount of foliage which will provide thorough coverage throughout the canopy. Allow sprays to dry before overhead irrigation is applied.

Apply this product at rates of 4-10 fl. oz. per acre in 100 gallons of water. Spray volume may range from 50 up to 300 gallons of finished spray per acre depending upon equipment, plant species and plant growth stage at time of application.

Note The Directions for Use of this product reflect the cumulative inputs from both historical field use and product testing programs; However, it is impossible to test this product on all species and cultivars. A preliminary trial is suggested on a small scale before a full treatment is applied to any plant type not shown on this label but found in a similar use site with a listed disease problem .Wait 5 - 7 days after treatment to evaluate results This product is not recommended for use on African Violets, Begonias, Boston Fern and Geraniums.

HOW MUCH TO USE FOR SMALL PLANTINGS - Add 1 teaspoon to 2.5 gallons of water

Pump Style Sprayers

- 1. Add the appropriate amounts of concentrate and water to the sprayer tank.
- 2. Close the sprayer shake well and pressurize.
- 3. Adjust nozzle to a coarse spray pattern and apply.
- 4. Occasionally re-pressurize the sprayer if needed to maintain a good spray pattern.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage and disposal.

PESTICIDE STORAGE: Store above 28° F or agitate before use.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

CONTAINER HANDLING

[NONREFILLABLE CONTAINERS].

Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying.

(Nonrefillable container ≤5 gallons) Triple rinse as follows. Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill or by incineration or if allowed by state and local authorities by burning. If burned stay out of smoke.

(Nonrefillable > 5 gallons) Triple rinse as follows. Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth ensuring at least one complete revolution for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill or by incineration or if allowed by state and local authorities by burning. If burned stay out of smoke.

[REFILLABLE CONTAINERS]

Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

To clean the container before final disposal, empty the remaining contents from this container into application equipment or a mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill or by incineration or if allowed by state and local authorities by burning. If burned stay out of smoke.

CONDITION OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions tor Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather, presence of other materials or other influencing factors in the use of the product, which are beyond the control of AXION AG PRODUCTS LLC or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold AXION AG PRODUCTS LLC and Seller harmless for any claims relating to such factors.

To the extent consistent with applicable law, AXION AG PRODUCTS LLC warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or AXION AG PRODUCTS LLC, and Buyer and User assume the risk of any such use. AXION AG PRODUCTS LLC MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

To the extent consistent with applicable law, neither AXION AG PRODUCTS LLC nor Seller shall be liable for any incidental, consequential or special damages resulting from the use or handling of this product. To the extent consistent with state law, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF AXION AG PRODUCTS LLC AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF AXION AG PRODUCTS, LLC OR SELLER, THE REPLACEMENT OF THE PRODUCT.

AXION AG PRODUCTS LLC and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of Sale and Limitation of Warranty and Liability which may not be modified except by written agreement signed by a duly authorized representative of AXION AG PRODUCTS LLC.
